EDUCATION

Nanyang Technological University, Singapore

Aug 2023 – May 2027

- Major: Bachelor of Computer Science

EXPERIENCE

Full-Stack Developer Intern, DaxAsia - Crypto Trading Startup

May 2025 – Aug 2025

- Built and launched a real-time React + Firebase dashboard for 150 users, replacing a spreadsheet process and cutting data-update latency from hours to seconds.
- Reduced support tickets 70% by introducing a self-serve portal for wallet top-ups, referrals and transaction history.
- Halved admin time-on-task by delivering a role-based control panel (bulk bans, KYC approval, wallet adjustments) backed by Cloud Functions and Firestore triggers.

Research Assistant, IIT Kanpur, Kanpur, Uttar Pradesh, India

June 2024 - Aug 2024

- Accelerated system efficiency by 30% by developing an *asset management system* using Docker, Node.js, and MongoDB, and synthesizing Elasticsearch for better data retrieval.
- Created and optimized backend APIs for firm's internal applications by utilizing Node.js and Cron jobs, reduced API response times and improved overall system performance, streamlining data processing and retrieval
- Contributed to development of SIEM technology, integrating various cybersecurity features and tools, supporting the firm's goal of advanced threat monitoring and management.

PROJECTS

Solvd

April 2025 – Present

- Launched Solvd, an AI-powered physics-tutoring platform that converts problems into Manim-animated videos, shipping the MVP in 6 weeks and onboarding 20 beta students in the first month.
- Secured a \$2.5K non-dilutive grant, extending Solvd's runway by 3 months, by presenting a data-backed product roadmap and early traction to an academic funding panel.
- Led a 3-person cross-functional team, instituting agile sprints and weekly user-testing loops that pushed 10 feature releases while maintaining <2-day average bug-fix turnaround.

EchoEase

Nov 2023 - Jan 2024

- Improved Asthma/COPD detection accuracy by 93% through training Azure AutoML's VotingEnsemble (LightGBM, XGBoost, RF, KNN, SVM) on clinic-sourced cough datasets with engineered acoustic features (MFCCs, ZCR, wavelets, LPC).
- Increased accessibility of respiratory monitoring for low-resource patients by developing an Android app that integrated ensemble ML models with clinical data, delivering real-time assessment and early detection.

Kyodo

Jan 2024 – Aug 2024

- Initiated a local-language coding platform to address language barriers in coding education, achieving a 50% preference rate in post-pilot surveys, by leading a team of 20 and partnering with a state government to implement it in 4 schools.
- Collaborated with 7 officials to integrate the coding platform into school curricula (900+ students engaged) and partnered with a non-profit trust to ensure its long-term sustainability.

CO-CURRICULAR & LEADERSHIP

Personal AI Projects, CodeLit (AI Project Youtube Channel)

Dec 2024 – Present

- Built 15+ AI agent projects (LLM coding assistant, Vision/Telegram RAG, web search) with 18K+ total views.
- Published open-source repos (StackFlow, ColPali-Vision RAG, crawl4ai) and prototyped multimodal RAG + agentic AI workflows with interactive demos (Streamlit, GitHub, Telegram), exploring early embodied AI concepts in reasoning, planning, and tool use, enabling 200+ developers to replicate and adapt workflows.

Vice-President, Google Developers Students Club

Sep 2023 – May 2024

- As Vice President, increased Google Developers Student Club's visibility by organizing workshops with industry speakers and managing social media, boosting event attendance and online engagement.
- Led communication for Google Developers Student Club, coordinating workshops with prominent speakers

TECHNICAL SKILLS

- Tools & Programming Languages: OpenCV; Python; Docker; React.js; TensorFlow; Scikit-Learn; Node JS; C++; Java
